Connor Voelk

Seattle, WA linkedin.com/in/connorvoelk github.com/connorvoelk

Software Engineer with 4+ years of experience at AWS and Tesla, specializing in delivering value through GenAI and Cloud platforms through production-grade architecture and intuitive product design.

Skills

AWS Certifications	Solutions Architect, Developer, Machine Learning Engineer (2026); AI Practitioner (2025)
Languages & Frameworks	TypeScript / JavaScript, Python, Java, Kotlin, SQL, Bash, GraphQL (Apollo), React.js, Redux, Node.js, Flask, LangChain, Jest, Playwright, Android, Dart (Flutter), IaC (CDK, Terraform)
Tools & Technologies	AWS (Bedrock AgentCore, SageMaker, EKS, Neptune, DynamoDB, IoT Core), Figma, Docker, Kubernetes, Kafka, Redis, Micro-frontends, CI/CD, GraphRAG, Agent Orchestration, MCP, REST, MQTT

Experience

Amazon Web Services (AWS) — Seattle, WA

Cloud Application Developer — January 2024 – July 2026

Translating C-suite business requirements into high-impact GenAI and cloud-native software architectures.

Agentic AI Platform

Fortune 50 Healthcare, $1.9M contract

- Enabled thousands of internal users to deploy autonomous agents for cross-functional API tasks by architecting an enterprise platform using LangChain, AWS Bedrock AgentCore, and Model Context Protocol.
- Accelerated knowledge discovery across millions of data points by developing a GraphRAG system utilizing Amazon Neptune, Redis, and Textract to map complex semantic relationships.

Mobile Telemetry SDK

Market-Leading Satellite Provider, $1.5M contract

- Led a team of 3 developers to build a Kotlin Android SDK from the ground up using dozens of system APIs, enabling automakers to add location sharing and emergency assistance to their apps and Android Auto.
- Reduced messaging costs by 3.5× and achieved sub-50ms latency by engineering a peer-to-peer networking layer using AWS IoT Core and MQTT as an alternative to traditional HTTP APIs.

Frontend Engineer, Delivery Consultant — July 2022 – January 2024

Leveraging value and impact through intuitive, high-performance user interfaces for complex backends.

ML-Driven Dashboard

Major National Media Network, $2.0M contract

- Increased ad-slot sales by 15% on average by designing a simulation system that enabled non-technical users to model complex viewership permutations in real-time.
- Streamlined the full product lifecycle from Figma prototyping to a React.js & GraphQL production app, visualizing granular demographic data for multi-million dollar scheduling decisions.

Multi-Destination Live-Stream Orchestrator

Fortune 10 Big Tech Platform, $1.4M contract

- Prevented the cancellation of a $1.4M contract by rescuing a failing engagement and revitalizing the UX/UI and backend abstraction layer within a high-velocity 4–week window to restore customer confidence.
- Consolidated 8 disparate streaming destinations into a single interface, significantly reducing hardware overhead and operational complexity for broadcast engineers via AWS Elemental.

Tesla — Palo Alto, CA

Software Engineer Intern — January – June 2021

- Automated real-time data ingestion and processing for hardware-in-the-loop (HIL) testing by architecting a Python and Apache Kafka pipeline, replacing manual reporting for urgent hardware tests.
- Developed a centralized web application using React.js and Flask, featuring visualizations that enabled engineers to monitor live sensor streams and query legacy test data with sub-second response times.

Education

University of Washington — Seattle, WA — 2022

Bachelor of Science in Informatics, Specialization in Human Computer Interaction

Dean's List Scholarship, iSchool Teaching Assistant, Computer Science School Research Assistant
